

Blended 2

Blended MPS

Investment objective and policy

These discretionary managed model portfolios offer risk-profiled investment solutions, all of which have a dynamic top-down asset allocation strategy implemented using active and passive funds.

The investment objective for the Blended 2 Model Portfolio is to provide a long-term total return which is superior to the UK CPI inflation rate plus 1%. The performance of the model portfolio is not intended to track the rise (or fall) of any specific index.

Key facts

Inception Date	Sep-18
Fees	
AMC	0.25%
Total Ongoing Charges of Underlying Investments	0.27%
Portfolio Total Ongoing Charges	0.52%

European equity markets outperformed the US in January, marking a divergence from their recent performance profile.

Donald Trump's return to the White House was supportive for US equities, but the emergence of Chinese artificial intelligence (AI) company DeepSeek, called into question the US technology sector's ability to deliver against elevated expectations.

One of Mr Trump's first acts when granted the keys to the Oval Office was to reverse many climate initiatives. These included the US's immediate withdrawal from the Paris Agreement on climate change and a promise to "drill, baby, drill" to increase the country's output of oil and gas.

Mr Trump repealed a 2023 memo from predecessor Joe Biden barring oil drilling in 16 million acres in the Arctic. The new president promised to fill up strategic oil reserves and export US energy all over the world.

The new president pledged to raise tariffs of 25% on Mexican and Canadian goods from the start of February, as he targets illegal immigration and drug smuggling. However, he postponed these measures following action at the borders by both US neighbours. New tariffs were raised against Chinese goods, although they were lower than threatened in his campaign, news which supported Chinese equities.

Concerns about the inflationary aspect of the new administration's policies remain. Also proposed are mass deportations that will make low-skilled workers scarce, and tax cuts that are likely to increase or support consumer spending. Some tariffs against European goods are also expected. This resulted in some bond-market volatility, but there was a softer-than-expected US inflation number in December. Commodity prices generally rose, with the gold price hitting an all-time high.

The European Central Bank once again cut interest rates in January, making four cuts so far in its easing cycle. Inflation is now at its target level, although the Eurozone economy remains weak.

Fourth quarter company earnings have generally been supportive of equity markets, but only about one third of businesses have issued statements so far.

Important Information

Certain information ©2023 MSCI ESG Research LLC. Reproduced by permission

The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested. Performance is calculated on a Total Return basis using a notional portfolio in Financial Express Analytics. Performance is net of Charles Stanley investment management fees but not adviser fees nor platform costs. Any charges and fees applied by platforms and/or authorised intermediaries will be charged in addition to the charges shown. The Total Ongoing Charges Figure (TOC) is calculated on a periodic basis using a weighted average of the most recent publicly available Total Ongoing Charges for the underlying investments as at the date of the factsheet. This includes the underlying funds' Ongoing Charges Figure plus Transaction costs plus Incidental costs. Please note that whilst we endeavour to show all charges associated with specific funds, sometimes this is not possible due to the information not being made available by the fund provider. In such cases transaction or incidental cost information may be missing. Portfolios linked to this Model Portfolio may not exactly replicate the model due to the difference in timing of initial investment or rebalancing differences resulting from minimum transaction size limits on platforms. The management and rebalancing of this Model Portfolio does not take Capital Gains Tax into consideration. Although Charles Stanley's information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose.
